

HARSH DESAI

Senior Data Analyst & Analytics Engineer | SQL, Python & dbt | BI, Pipelines & Executive Analytics
Frankfurt, Germany | +49 1701021295 | hbdesai.work@gmail.com | linkedin.com/in/harsh-desai | harshbdesai.github.io

PROFESSIONAL SUMMARY

Senior Data Analyst and Analytics Engineer with 5+ years building ETL pipelines, data models, and BI dashboards across financial services and consulting. Advanced proficiency in Snowflake, dbt, Databricks, Tableau, and Power BI. Track record of delivering data products that drive GTM strategy, marketing analytics, and executive decision-making. Translates complex findings into clear narratives for technical and executive audiences. Open to Data Analyst, Analytics Engineer, and Data Scientist roles across Germany. Fully authorized to work in Germany — no sponsorship required.

PROFESSIONAL EXPERIENCE

- Capital One | Lead Data Analyst | McLean, VA

Dec 2024 – Sep 2025

 - Identified a critical legacy code error overpaying associates on ineligible deals by \$2M per quarter, uncovered while rebuilding the compensation pipeline for new credit policies — corrected the business logic and eliminated the overpayment entirely.
 - Re-engineered the client segmentation pipeline end-to-end using SQL and Python, cutting execution time by 75% and eliminating dependency on third-party platforms through modular, documented pipeline design.
 - Built and maintained Power BI and Tableau dashboards surfacing field compensation performance and sales pipeline metrics, enabling VP-level leadership to track KPIs, identify performance gaps, and make real-time acquisition decisions.
 - Defined and championed the data product roadmap across Snowflake and Databricks, aligning engineering, product, and business teams around shared governance standards across 20+ data products.
 - Mentored junior analysts and led team workshops on data best practices, establishing peer review standards that improved output quality and consistency across the team.
- Capital One | Senior Data Analyst | McLean, VA

Oct 2023 – Nov 2024

 - Identified an additional 12% of high-value customers in the acquisition pool by analysing eligibility under relaxed policy scenarios, directly expanding the addressable market and informing targeting strategy for a major marketing campaign.
 - Built and maintained ETL pipelines across 20+ data products on Snowflake and dbt, enabling 50+ field acquisition and marketing partners to receive accurate, timely data at scale.
 - Improved customer entity resolution mapping by 17% through SQL optimization and data standardization, strengthening the foundation for downstream analytics and reporting.
 - Cut infrastructure analysis time for Visa and Mastercard interchange negotiations from 12 hours to 3 via SQL optimization, enabling faster commercial decision-making for finance leadership.
- DMI | Senior Business Intelligence Analyst | Washington, D.C.

Dec 2021 – Oct 2023

 - Built and maintained 20+ Power BI and Tableau dashboards for the CFPB and other federal clients, managing stakeholder requirements end-to-end from scoping through delivery and ongoing maintenance.
 - Conducted SQL-driven statistical analysis on engagement survey data to surface statistically significant patterns, delivering structured findings that informed leadership resource and budget decisions.
 - Automated Tableau Server governance workflows using Python, recovering approximately 8 hours of manual effort per week and improving data quality across reporting pipelines.
- Guidehouse | Analytics Consultant | Washington, D.C.

May 2020 – Dec 2021

 - Conducted a cost-benefit analysis on payment platform adoption across GSA and federal agencies — modelling implementation costs, 5-year forecasts, and breakeven customer volumes — revealing the platform would cost 3x the original bid, directly informing the decision not to proceed.
 - Built a production-grade R-based ETL pipeline for automated vulnerability reporting at DHS CISA, eliminating manual reporting overhead entirely and establishing scalable data automation in a federal environment.

TECHNICAL SKILLS

Languages: SQL, Python, R
Data Engineering: Snowflake, dbt, Databricks, Airflow, PostgreSQL, AWS (S3, Redshift), ETL Pipelines, Data Governance
Visualisation: Tableau, Power BI (DAX), Looker, Metabase, Excel (advanced)
Analytics: A/B Testing, Statistical Modeling, Regression Analysis, Forecasting, EDA, ML Concepts
Platforms & Tools: Git/GitHub, GitHub Actions, Salesforce, JIRA, Agile/Scrum, AI-assisted development (Claude, Copilot, Cursor)

EDUCATION

University of Virginia | M.S. Business Analytics2020

North Carolina State University | B.S. Chemical Engineering2015
